

SMRTLED SOS Alert System

Shooter On Site (SOS)

Since Columbine there have been more than **404 school shootings** and 149 year to date; since gun law reforms have taken way too long, a quicker way to address this issue has become a big priority for a local Bay Area company. GreatTEK, an award winning Software as a Service smart automation technology company located in Santa Clara California has set its sights on helping schools. **“We are launching our Shooter On Site (SOS) Alert System, it will save lives in schools,** and give a peace of mind to all teachers, parents and students; while in the most devastating situations when someone malicious gains access to the school campus.” said Principal Technical Program Manager, Alan Ghahramani. Teachers and students will benefit from a visual notification system while maintaining stealth mode.

SMRTLED SOS Alert system is one of GreatTek’s Inc. latest software innovations partnering with GR8 TEK Inc. its hardware OEM, to bring this advanced and much anticipated alert system, **providing a visual indication in each classroom notifying all teachers & office staff when a shooter is identified on campus and finally when it's all clear.** We are invested in providing safety to the school communities. The tragedy that took place in Texas made us want to support the school community and we can and will offer a solution to prevent such tragedy from ever repeating in schools. That is why we are offering this smart, simple and inexpensive solution so that as the school year starts, the school community is prepared and has a smart visual communication solution in case an intruder gains access to the campus.

Here is how it would work:

An advanced warning alert system with visual indicators in each classroom that can help communicate various emergency conditions without the use of email or phone while being locked down in each classroom.

The latest SMRTLED SOS Alert System runs in high availability mode, because it has a micro transformer and internal rechargeable battery along with its robust hardened design and integrated wifi & micro-processor enables a distributed visual platform that operates even when there are rolling blackouts or if the school's power has been compromised. With the mobile app easily accessible to all staff, to send an updated SOS status by any staff member who can use the app to trigger a visual notification by altering the LED strip color from GREEN to RED or YELLOW based on the HIGH alert mode or emergency mode with a single tap on their mobile phone giving that life line to save children and teachers lives when there is an active shooter on campus.

To conclude, please feel free to contact us at your earliest convenience. We know districts and schools are preparing to open their doors to students and teachers. Having this SMRTLED SOS Alert System in place would protect the school community and give teachers, parents and students a peace of mind that the school leadership values their safety, when on school grounds. Lastly, please email or give us a call, we will be more than happy to meet and present how our SOS Alert System for Schools would work and answer any questions you may have.

Help us **transform** homes, cities, and enterprises with seamless smart automation.
